Project Title	EduGenie: Google Gemini Powered Learning Assistant
Maximum Marks	5 Marks
Report	Project Proposal (Proposed Solution)

Project Proposal (Proposed Solution) Report

The proposal aims to provide students with an AI-powered learning assistant that makes learning more interactive and personalized. EduGenie uses Google Gemini to answer questions, explain difficult topics in simple language, summarize study material, and generate practice quizzes.

Project Overview

Objective The primary objective is to reduce students' learning difficulties by providing instant, easy-to-understand and personalized academic assistance through an AI-powered learning assistant.

Scope The project covers a responsive web application with an AI chat interface, question answering, topic explanations, study-material summarization, quiz generation and basic learning support. Google Gemini is used as the AI engine. Advanced integrations and large-scale institutional features can be considered in future scope.

Problem Statement

Description Students often struggle to understand difficult concepts, clear doubts quickly, and revise large amounts of study material. Generic learning resources may not match each student's pace or preferred level of explanation. This can make learning time-consuming and less engaging.

Impact A simple AI learning assistant can provide students with immediate guidance, simplified explanations and practice opportunities, helping them study more independently and efficiently.

Proposed Solution

Approach EduGenie is a web-based learning assistant powered by Google Gemini. The application accepts student questions or learning requests and uses Gemini to generate context-aware explanations, examples, summaries and quizzes. The interface is designed to keep the learning interaction simple, accessible and student-friendly.

Key Features

- AI-powered chat assistant using Google Gemini.
- Instant doubt clarification and question answering.
- Simple explanations for difficult academic topics.
- Study-material and topic summarization.
- AI-generated quizzes for practice and revision.
- Examples and step-by-step explanations where appropriate.
- Personalized learning assistance based on the student's request.
- Responsive interface for desktop and mobile devices.
- Learning support designed for self-paced study.
- Future-ready architecture for additional educational features.

Resource Requirements

Resource Type	Description	Specification / Allocation
Hardware	Development and testing device	Standard PC or laptop; no dedicated GPU required
Memory	Development environment	4 GB RAM or more recommended
Storage	Project files and dependencies	Local disk space for source code and packages
Frontend	Web application interface	React / HTML / CSS / JavaScript
AI Service	Generative AI	Google Gemini API
Backend	API/service layer if required	Node.js or suitable backend/API layer
Development	IDE and tools	Visual Studio Code, Git, GitHub, Chrome DevTools
Deployment	Web hosting	Vercel / Firebase or suitable hosting service

Data

Data Source	Description / Format
Student Queries	Questions, prompts and learning requests submitted by users
Learning Content	Topics or study material provided for explanation or summarization
Quiz Content	AI-generated questions, options and answers for practice
Learning Progress	Basic progress or activity information, if implemented
