

Scalability & Future Plan

Date: September 2026

Team ID: 6abc95cbdfc814753aa5fe42

Team Name: EduGenie: Google Gemini Powered Learning Assistant

Project Name: EduGenie – Google Gemini Powered Learning Assistant

Maximum Marks: 1 Mark

Scalability & Future Plan:

This document outlines how the current EduGenie solution can be scaled to handle larger numbers of learners, increased educational data loads, and extended AI-powered learning features in the future. It also captures the team's roadmap for enhancing and evolving EduGenie beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address
1	Learning preferences, generated learning content, and progress may depend on client-side/session storage in the current version; there is no fully integrated backend database for persistent multi-device synchronization.	Progress and preferences may not persist reliably across devices and accounts.	High
2	Authentication and account management are limited in the current version and require a production-ready identity system for real learners.	The system cannot safely support a large number of real user accounts and sensitive learning data without stronger authentication and access control.	High
3	Some learning-progress and completion feedback may require additional refinement as learners move between topics, quizzes, and study sessions.	Inconsistent feedback can make the learning journey less clear and reduce learner motivation.	Medium
4	AI learning assistance and educational content coverage can be expanded with richer resources, multimedia explanations, quizzes, summaries, and personalized learning paths.	Limited content variety can reduce personalization and guidance for different learner needs.	Medium
5	Testing and monitoring need to be expanded for AI responses, learning workflows, authentication, and core application features.	Changes may introduce unexpected issues as the platform grows and more features are added.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Current version is primarily a client-facing learning assistant with limited account infrastructure.	Keep the web front end on a CDN. Add a managed backend API with secure sign-up/login, rate limiting, monitoring, and load testing before large-scale deployment.
2	Data Storage	Learner preferences, learning plans, generated content, and progress are not yet supported by a full cloud data layer.	Move users, preferences, learning plans, quiz results, and progress to a cloud database for persistent multi-device synchronization. Keep local storage as an offline cache where appropriate.
3	Performance	AI-assisted learning flows and content generation can require network requests and processing time.	Use API caching where appropriate, asynchronous processing, optimized frontend bundles, CDN delivery, optimized media, and progressive web app support. Add automated tests for key learning workflows.
4	Security	Production-scale authentication, authorization, and protection of learner data require a dedicated backend security layer.	Use real authentication, hashed passwords or a trusted identity provider, secure sessions/tokens, server-side validation, protected APIs, role-based access control, and a clear privacy policy.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Real authentication and cloud database for persistent learner profiles, synchronized learning plans and progress; refine completion and progress feedback.	Within 2–3 months	Removes major persistence and account-management limitations and provides a stronger foundation for scaling.
Phase 3	Richer educational resources such as images/short videos, interactive quizzes, progress charts, achievements and reminders; progressive web app support for offline study.	3–6 months	Improves learning guidance, engagement, consistency, and access when connectivity is limited.
Phase 4	Advanced AI-assisted personalization, adaptive learning paths, topic recommendations, performance-based plan adjustments, and broader academic support features.	6–12 months	Creates a more complete learning companion with study experiences that adapt to each learner's progress and needs.
